Vision Statement

Fast Stat is a web application for swimmers who want to improve their athletic capability via an analytical review of stats and trends that allows these athletes to review how they felt and what they accomplished. The Fast Stat athletic logbook is a web app logbook designed to keep track of athletic performances and practices where you can comment on how you felt and what went well and what went wrong. Unlike other competition tracker apps like meet mobile, and collegeswimming.com, Fast Stat is personal allowing you to keep track of how you felt during competition. Additionally, Fast Stat is oriented towards those in a team setting where this information can be easily shared with a coach.
